Here's an intriguing new audio software company, Audio Sektor, founded by a couple of sound experts. They're new on the scene, but they've done a good job of getting noticed in a short time. They present a pretty slick GUI, a highly capable tool that will do all sorts of different tasks, and a sound library that's pretty good. It's not very comprehensive yet, but it's growing in all the right ways. Let's get right into it and see what this new software can do. What is Audio Sektor? Audio Sektor is a free to use digital audio workstation, at least it is for now. I say at least, because this app has plenty of work to do. There are plans to charge money for some of the functions. But right now, it's a free download that needs to be updated every time there is a new version. But don't let the free aspect put you off. This is a serious piece of software that's packed full of features. If you work in the field of music production or sound editing, you'll really appreciate what Audio Sektor can do. Audio Sektor Features: You have all the familiar modules that you'd expect in any digital audio workstation. This includes instruments, a multi track audio editor, effects, MIDI, and more. Effects Most of the effect plugins are free and available to all users. Of course, there are a few filters and reverbs that are only available to members. Concerts Audio Sektor does it's best to recreate the sound of a live band or performance. Concerts make up the bulk of their sound library. They've done a good job of providing many different instruments and sound effects. This means you'll always have a good tool for whatever style of music you work in. Etc. Audio Sektor also has a good range of other functions like a mixer, a pattern sequencer, and even a basic synth. What Are the Strengths? There are a lot of things that set Audio Sektor apart from other software options. Not only is it free, it's designed from the ground up for people like me, audio professionals. But it's not just about being easy to use 82157476af
